

MyID® PIV is a software solution for federal agencies that issue and manage secure digital identities to federal employees using public key infrastructure (PKI).

MyID PIV credential management software (CMS) enables federal agencies to issue and manage FIPS 201 compliant Personal Identity Verification (PIV) credentials to smart cards and derived PIV credentials to mobile devices, providing the highest levels of secure authentication for mobile working and ensuring compliance with US federal security standards.

BENEFITS OF MyID PIV

Comply with federal government policy and deliver the highest levels of security

Replace passwords with strong two-factor authentication, providing the most effective protection against the number one cause of data breach - weak or compromised user credentials in full compliance with federal government security policy

SIMPLE TO USE

Shaped around ease of use both for operators and end users, MyID PIV guides users through processes, reducing day to day operational costs and ensuring high levels of user adoption

INTEGRATION FLEXIBILITY

MyID PIV is developed to work with what you already have, minimising impact on your existing environment and speeding up deployment

PROVEN FEDERAL-GRADE SOFTWARE

Today MyID PIV helps a wide variety of federal agencies and US government suppliers maintain FIPS 201 PIV compliance by issuing and managing digital identities across millions of federal worker and supplier digital identities

TAKE CONTROL WITH MyID PIV

MyID PIV IS FOR

- Federal agencies who want to protect their networks, systems and cloud-based resources with the most secure method of authenticating employees using strong two-factor authentication, meeting FIPS 201 PIV compliance
- Federal agencies who wish to issue mobile identities compliant with SP800-157 federal guidelines, including integration with mobile device management systems (MDMs)
- Organisation working with US government who want to follow best practice security and be interoperable or compatible with PIV
- Organisations who want a flexible solution designed to work with existing business processes and integrate with existing infrastructure
- Organisations who want a proven secure solution, trusted worldwide for mission critical programs

USE MyID PIV TO

- Comply with FIPS 201 and related federal security standards
- Issue cryptographic protected digital identities to individuals using public key infrastructure (PKI) to smart cards, USB tokens, smartphones and virtual smart card enabled technology
- Configure certificate and device issuance policies, ensuring the right people receive the right digital identities
- Sponsor, enrol, approve, issue and manage the lifecycle of users and PIV credentials form a single integrated solution Simple process-driven features for help desk to issue replacement devices upon loss, or re-enable locked devices
- End users can collect new certificates to their devices through a simple self-service application
- Maintain full auditability and reporting capabilities – allowing visibility of who issued which digital identities to which users and on what device, helping with audits and proof of compliance with federal policy

MyID PIV INCLUDES

- Software including connectors to directories, approved federal PKI service providers, hardware security modules, PIV smart cards, USB tokens, virtual smart cards, smart card printers and mobile devices
- Operator desktop for administration and management
- End user self-service kiosk for derived PIV credentials
- End user self-service client application
- APIs and SDKs for integration and customisation
- Configurable credential management policies

MyID PIV WORKS WITH

Technology	Vendor	Product
Smart Cards	NXP	Athena IDProtect
	Gemalto	ID Prime smart card ID Prime PIV smart card
	Giesecke & Devrient	SmartCafe Expert SCE PIV card
	Idemia	ID-One Cosmo ID-One PIV
	SafeNet Assured Technologies	SC650
	T-Systems	TCOS smart card
	Cryptas	TicTok
Mobile Device Management	VMware	AirWatch Workspace ONE
	Citrix	XenMobile (Endpoint Management)
	MobileIron	MobileIron Core
	Centrify	Identity Service
USB Tokens	Yubico	YubiKey YubiKey FIPS
	Gemalto	SafeNet eToken SafeNet eToken FIPS
Certificate Authorities	DigiCert	Symantec MPKI
	Entrust Datacard	Entrust Authority PKI
	HID Global	Indentrust PKI
	Microsoft	Certificate Services
	PrimeKey	EJBCA
	Verizon	UniCERT
Virtual Smart Cards	Intel	Intel Authenticate
	Microsoft	TPM Virtual Smart Card Windows Hello for Business
	Cryptas	Cryptas VSC
Hardware Security Modules	Gemalto	SafeNet Luna Network HSM
	nCipher	nShield HSM
	SafeNet AT	Luna SA for Government
Image Capture	Webcam	Webcams supporting video for windows
	Document Scanners	Scanners supporting WIA2 integration
Fingerprint Capture	Signature Capture	Interlink Electronics ePAD
	Facial Biometric Capture and image quality checks	Canon EOS Rebel Logitech HD Pro
	HID Global	Crossmatch Verifier URU 5300 (Digital Persona)
	SecuGen	Hamster/Hamster Pro ID/USB SC/PIV
