

MyID | Professional

THE STRONGEST USER AUTHENTICATION - MADE SIMPLE

MyID® Professional simplifies issuing and managing PKI-based user authentication credentials by combining out of the box integration with pre-defined business processes based on best practice.

Software that delivers government-grade two-factor authentication with smart cards and USB tokens for enterprises that will not compromise on cybersecurity.

BENEFITS OF MyID PROFESSIONAL

STEP UP TO THE HIGHEST LEVELS OF SECURITY

Replace passwords with strong two-factor authentication, providing the most effective protection against the number one cause of data breach - weak or compromised user credentials

PROVEN SOLUTION THAT WORKS IN YOUR ENVIRONMENT

Reduce risk and timescales by using proven interoperable components and ways of working

LOWEST COST OF OWNERSHIP

Reduce complexity and total cost of ownership by choosing a standardised solution on a subscription basis

SOFTWARE ENRICHED BY >20 YEARS' EXPERIENCE

Benefit from more than 20 years of experience that Intercede has gained from successfully delivering solutions across the world's most security conscious organisations

TAKE CONTROL WITH MyID PROFESSIONAL

MyID PROFESSIONAL IS FOR ENTERPRISES WHO

- Want to protect their networks, systems and cloud-based resources with the most secure method of authenticating employees
- Want a simple, pre-configured solution following best practice
- Prefer a subscription-based solution with a low cost of entry
- Wish to make best use of the Microsoft Windows architecture they have already invested in

USE MyID PROFESSIONAL TO

- Secure Windows and network logon
- Secure VPN and remote access
- Protect cloud resources such as Microsoft Office 365
- Sign and encrypt emails, protecting against spear-phishing attacks
- Deploy PKI credentials for strong two-factor authentication to smart cards and USB keys
- Enable simple self-service credential management at the user's own desktop, reducing help desk costs

MyID PROFESSIONAL INCLUDES

- MyID Professional server software
- Connectors to Microsoft Active Directory and Microsoft Certificate Services
- Connectors with a wide range of leading smart cards and USB tokens
- Connectors with hardware security modules, used to secure keys and sensitive data
- Operator desktop for system administration and helpdesk operators
- End-user client for simple self-service operations
- Documentation covering installation, configuration and use
